s=(3,60,72,126,183,186)
gcd(210,s)=3
conductor = 70

b=(2,9,129,142,168,180)
gcd(210,b)=1
conductor = 210

Same Fermat degree, different exact conductors

A coordinate-cube pullback accounts for s, but does not account for b.
