Prime contact separates three disjoint sectors

input a = 2
$R_a = 2$
$M_a = 1$

input b = $109 \cdot 3^{10}$
$R_b = 3 \cdot 109$
$M_b = 3^9$

output c = 23^5
$R_c = 23$
$M_c = 23^4$

Output target: $M_c \leq K_\varepsilon R_a R_b R^\varepsilon$
Exactly the same ABC inequality

Repeated output depth must be compared with input prime support.
