Five Bernoulli translation gaps telescope to 100
Endpoint difference: $\frac{11999}{30} - (-\frac{1}{30}) = 400$
Divide by four: $0 + 1 + 8 + 27 + 64 = 100$
Gap $[B_4(k+1) - B_4(k)]/4$
Translation index k, with endpoint N = 5
