Lower nodes vanish; first certificate m=5
Isolating polynomial $f_{3,m}(x_n)$
Arithmetic node index n
Negative prime atom
$f(x_3) = 1$
Positive atom
Negative atom
No squarefree atom
Proved higher-node bound
Exact rational bound crosses below zero
Proved upper bound on $\int f_{3,m}^2 \, d\nu$
Suppression exponent m
$\lambda_2 = 1, \quad \lambda_3 = -1.1$
First negative upper bound
m=5; Hankel order=8
