The function stays above a proved positive bound
$q = r = 1/4,\ \rho = 1/2$
$q = r = 1/2,\ \rho = 1$
$q = 1/3,\ r = 2/3,\ \rho = 1$
Dashed: $c_-(R + C)^\rho$
$\log M(R)$
Radius R
A finite window does not determine the type limit
computed value
positive lower-type constant
$\log M(R)/R^\rho$
Radius R
