A guaranteed separation radius
Sufficient radius for $F_\varepsilon/F_0 \geq 2$
$10^{16}$
$10^{14}$
$10^{12}$
$10^{10}$
$10^{8}$
$10^{6}$
$10^{4}$
Conservative upper bound on the radius
needed for this particular separation test.
$10^{-11}$
$10^{-9}$
$10^{-7}$
$10^{-5}$
$10^{-3}$
$10^{-1}$
Fast-channel weight $\varepsilon$
Why the guarantee eventually succeeds
Bounds on logarithmic growth
Lower bound for $\log F_{10^{-6}}$
Upper bound for $\log F_0$
$10^{11}$
$10^{8}$
$10^{5}$
$10^{2}$
$10^{-1}$
$10^{-4}$
$10^{-7}$
$10^{-10}$
$R_2 \approx 1.237 \times 10^9$ for $\varepsilon = 10^{-6}$
$10^{3}$
$10^{5}$
$10^{7}$
$10^{9}$
$10^{11}$
Radius R
