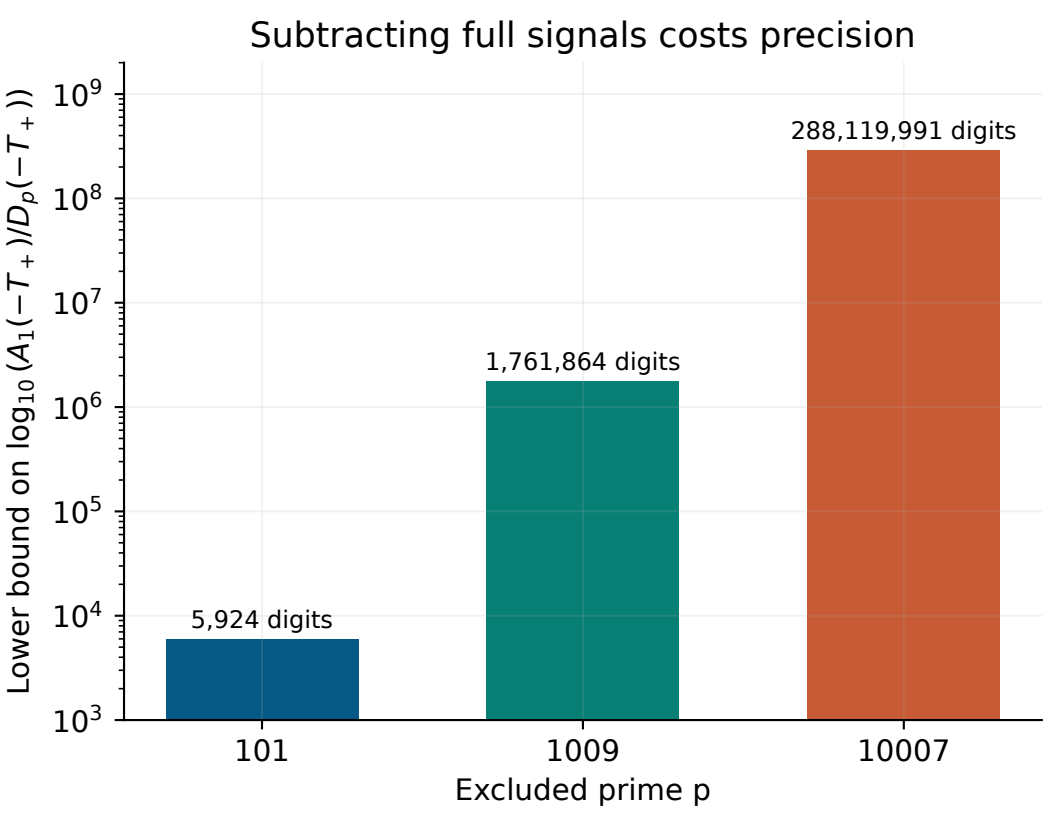
Where the difference reaches 10^{-6}
p=10007: T+=1.153e+09
p=1009: T+=7.051e+06
p=101: T+=2.369e+04
Left endpoint: no larger than tolerance
Right endpoint: at least tolerance
0.960 0.965 0.970 0.975 0.980 0.985 0.990 0.995 1.000 1.005
Negative depth divided by the sufficient threshold T_+



Subtracting full signals costs precision
Lower bound on $\log_{10}(A_1(-T_+)/D_p(-T_+))$
