A finite maximum scan has deterministic ties

Scan coverage matters; ordering and duplicate visits need not be unique.

Energies	Seed	Scan	Chosen label
(1, 1)	0	[1, 0]	0
(1, 1)	1	[0, 1]	1
(16, 1)	1	[1, 0, 0]	0

Only a strict increase replaces the incumbent.

Exact selection rules; a maximum is guaranteed by complete scan coverage.
