Claim boundary for the generated function theory

PROVED HERE

- polyphase lift
- Bernoulli packet refinement
- cyclotomic inverse transform
- energy asymptotic

CLASSICAL INPUT

- Hurwitz zeta
- Raabe multiplication
- Lerch transcendent
- Báez-Duarte criterion

COMPUTATIONAL

- Wronskian root maps
- cyclotomic norms
- coherence plots
- character packets

OPEN

- Wronskian sign laws
- zero interlacing
- p-adic detail bounds
- character-uniform coherence

MAJOR CONJECTURE

- subpolynomial Möbius coherence
- RH and GRH applications
- positive canonical systems
