compatibility	$a+b=0$	× 1
protected	$a=0$	× 1
protected	$b=1$	× 1

Add all three equations in F_2.

$$0=1$$

$\ell=(1,1,1)$ $\quad\quad$ $\ell M=0,\quad \ell b=1$

The third coordinate is free, but no value can repair this contradiction.

This is an impossibility certificate for the prescribed binary problem, not a timeout.
