Two radicals have different mathematical jobs

Base field $K = \mathbb{Q}(\sqrt{5})$
Characteristic zero
$\varphi = (1+\sqrt{5})/2$

Coefficient field $k = \mathbb{F}_{49}$
Characteristic seven
$w^2 = 5$

No identification of the two radicals is supplied by this notation.

Code a+7b represents a+bw, with $a,b \in \mathbb{F}_7$
