Tame inertia and Frobenius must form one matrix word

$$FTF^{-1} = T^{Q}$$

Compatible tame inertia and arithmetic Frobenius

$$\rho(T) = I + 7M$$

$$M^2 = 0 \text{ over } k$$

$$M = c\,[\theta, -\theta^2; 1, -\theta]$$

$$c = \beta(T) \neq 0$$

$$cp(F) - bp(T) = -hc$$

$$h = (Q-1)/7 \bmod 7$$
