At a conductor prime, retain its own local unit

$$\mathrm{Norm}(\pi_q) = q \quad \text{and} \quad \pi_q = q \cdot u_q$$

The rational prime q is the chosen uniformizer

Other conjugate terms
$b = 2, \ldots, 6$

Self-conductor term
u_q is a nonzero local unit

$$D_{q,q} = \Sigma\, (1-b)\, \ell_q(\pi_q(z q^b)) \quad \text{in } \mathbb{F}_7$$
