Fourteen reciprocity relations leave ten global directions

24 local coordinates
L has 14 rows
rank L = 14

←

10 global parameters
J is 24 × 10
rank J = 10

$$LJ = 0 \qquad \text{and} \qquad \operatorname{im} J = \ker L$$

The exact image concerns ordinary characters $z = p - p_0$
It classifies differences
The affine origin remains unknown
