Changing the primitive moves the target inside one image coset

$p_0 \to p_0 + \text{zchar}$
Global ordinary character

$t \to t - A\, z_0$
$N\, t$ is unchanged

Synthetic Pattern C: $t = e_1$ and $z_0 = e_1$
$N\, t = [0, 0, 1, 0, 1, 6, 6]$

This exact control tests origin invariance, not an actual arithmetic target.
