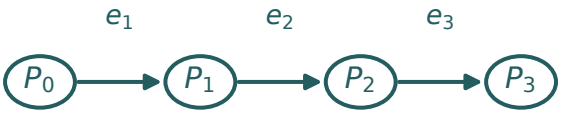
Typed edge words and directed packet walks

Target row, source column. The rightmost edge acts first.

Composable word

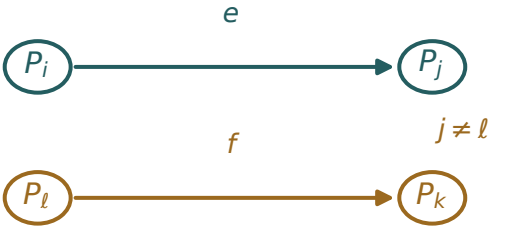


$$L_{e_3} L_{e_2} L_{e_1}$$

Executes e_1, then e_2, then e_3.

Only the $(3, 0)$ endpoint block survives.

Broken interface



$$L_f L_e = 0$$

One mismatched interface kills the product.

Directions follow packet types. A surviving product retains its outer source and target.
