A specialization may change the group

EXACT TOY / $x^3 - t$ is not a regular splitting-field family over $\mathbb{Q}$

$t = 0$	$t = 1$	$t = 2$
x^3 multiple roots	$(x-1)(x^2+x+1)$ C_2	$x^3 - 2$ S_3

$\zeta_3 \in F \cap \overline{\mathbb{Q}}$
nontrivial constants obstruct regularity

Group changes in this toy do not supply the regular input in the previous figure.
