Machine-Native Reasoning

Representation, Learning, and Computational Organization

VOLUME III
Formal, Visual and Lineage Companions

A connected compilation of the machine-related and theoretical computer science program.

7 source documents · 703 original source pages

The interfaces matter as much as the components.

Read the organizing argument, follow the connections, and return to the preserved proofs. Source editions retain their own assumptions, evidence and limits.

Collection edition 1.0.0 / 9 October 2026
Komorebi P.

Formal, Visual and Lineage Companions

AVL / AVOC: Lean and Evidence Companion 6
Formal 0.41.0 / standardized publication · 44 source pages

CBL / Certified Bayesian Inference: Lean Companion 51
Core 1.0.0 / standardized publication · 31 source pages

SIV / Self-Improving Intelligence: Visual Guide 83
1.0.0 · 36 source pages

AD / Agent Dynamics: Python Visual Atlas 120
1.0 · 14 source pages

LSV / Large Signal Model: Visual Notes 135
0.4.0 · 9 source pages

PCL / Portable Causal Lineage 145
Protocol 0.2 · 64 source pages

SRIC / Stratified Recursive Improvement Closure 210
2.4 / Block 23 · 505 source pages

Numbers at right are physical pages in this reader. Click an entry to open its source card. Original source pagination remains visible.

What this collection establishes

Connected, not conflated

The new synthesis maps relationships among the source works. Exact mathematical interfaces, conditional compositions, implementation gaps and proposed architectures remain different kinds of connection.

Preserved full texts

Every selected PDF appears unabridged. Its pages, theorem numbering, evidence classifications and historical sections are retained. An older experimental section is not new evidence for the complete architecture.

Theory is the principal product

No new training campaign, broad agent implementation, hardware experiment or corpus-wide Lean run is claimed. Small exact checks cover the newly written connecting example only.

A selected corpus, not every archive

The collection includes the listed twenty-four PDFs and six earlier complete source archives. Typed Proof Learner and Resolution Completion are represented by a recovered handoff note. Other unresolved source branches are listed in the package rather than silently claimed included.

Independent identities and permissions

Source versions and rights are retained independently. This compilation does not relicense the source works or establish a public repository release. A manuscript proof, a runtime test, an archived kernel record and an external empirical result are not interchangeable.
