Machine-Native Reasoning

Representation, Learning, and Computational Organization

THE COMPLETE SELECTED READER

A connected compilation of the machine-related and theoretical computer science program.

24 source documents · 1,859 original source pages
27-page connected synthesis

The interfaces matter as much as the components.

Read the organizing argument, follow the connections, and return to the preserved proofs. Source editions retain their own assumptions, evidence and limits.

Collection edition 1.0.0 / 9 October 2026
Komorebi P.

One argument. Three depths of reading.

Begin with the connected synthesis on physical page 7. It supplies the common vocabulary, four connecting results, a sixteen-interface register and one exact example that follows observation through action, correction, communication and revision.

I / Core Machine Theory

Evidence, understanding, signal models, executable semantics, inference, discovery and institutions. Starts on page 34.

II / Mathematical and Architectural Foundations

Representation calculus, nonlinear inference, shared workspaces, complexity, structured execution and preservation. Starts on page 515.

III / Formal, Visual and Lineage Companions

Source-level formal guides, Python visual explanations, continuity protocols and the extended historical recursive theory. Starts on page 1209.

The conceptual route

Evidence → representation → executable method → correction → discovery → shared work → accountable institutions.

The companion volumes in the ZIP make the same sources easier to navigate on smaller devices. The package also contains the standalone synthesis, preserved source PDFs, original archives, an offline index and exact page maps.

Core Machine Theory

GA / Grounded Abstraction 36
1.0.0 · 43 source pages

MU / Machine Understanding 80
1.0.0 · 50 source pages

LSM / Large Signal Model Foundations 131
Foundations 0.4.0 / software 2.3.0 · 66 source pages

OSL / Operator-Symbolic Language 198
Research edition 1.0 / Core 0.5 · 18 source pages

NEU / Neuralese 217
Research edition 1.0 · 20 source pages

CBI / Certified Bayesian Inference 238
Core 1.0.0 / standardized publication · 36 source pages

AVOC / AVOC: Artifact Value and Guarded Planning 275
Formal 0.41.0 / standardized publication · 37 source pages

PPT / Proof Path Theory 313
1.0.0 · 34 source pages

SII / Self-Improving Intelligence 348
1.0.0 · 60 source pages

MS / Machine Societies 409
1.0.0 · 106 source pages

Numbers at right are physical pages in this reader. Click an entry to open its source card. Original source pagination remains visible.

Mathematical and Architectural Foundations

SU / Stratified Universality for Resolved Representations 517
Mathematical base 2.0.0 / standardized publication · 262 source pages

SR / Sufficient Resolution 780
Standardized publication · 47 source pages

PRIQ / Hypergraph Lumpability and Bayesian Refinement 828
0.1.4 · 52 source pages

SRWT / Stratified Relational Workspace Theory 881
209-page monograph / repository 1.0.0 · 209 source pages

CIR / Circuit Obstructions 1091
Standardized publication / Lean Block 02 scope · 35 source pages

PRISM / PRISM-1: Packet-Programmable Processing 1127
Final updated architecture draft · 61 source pages

KPP / Komorebi Preservation Protocol 1189
Specification draft 0.1 · 20 source pages

Numbers at right are physical pages in this reader. Click an entry to open its source card. Original source pagination remains visible.

Formal, Visual and Lineage Companions

AVL / AVOC: Lean and Evidence Companion 1211
Formal 0.41.0 / standardized publication · 44 source pages

CBL / Certified Bayesian Inference: Lean Companion 1256
Core 1.0.0 / standardized publication · 31 source pages

SIV / Self-Improving Intelligence: Visual Guide 1288
1.0.0 · 36 source pages

AD / Agent Dynamics: Python Visual Atlas 1325
1.0 · 14 source pages

LSV / Large Signal Model: Visual Notes 1340
0.4.0 · 9 source pages

PCL / Portable Causal Lineage 1350
Protocol 0.2 · 64 source pages

SRIC / Stratified Recursive Improvement Closure 1415
2.4 / Block 23 · 505 source pages

Numbers at right are physical pages in this reader. Click an entry to open its source card. Original source pagination remains visible.

What this collection establishes

Connected, not conflated

The new synthesis maps relationships among the source works. Exact mathematical interfaces, conditional compositions, implementation gaps and proposed architectures remain different kinds of connection.

Preserved full texts

Every selected PDF appears unabridged. Its pages, theorem numbering, evidence classifications and historical sections are retained. An older experimental section is not new evidence for the complete architecture.

Theory is the principal product

No new training campaign, broad agent implementation, hardware experiment or corpus-wide Lean run is claimed. Small exact checks cover the newly written connecting example only.

A selected corpus, not every archive

The collection includes the listed twenty-four PDFs and six earlier complete source archives. Typed Proof Learner and Resolution Completion are represented by a recovered handoff note. Other unresolved source branches are listed in the package rather than silently claimed included.

Independent identities and permissions

Source versions and rights are retained independently. This compilation does not relicense the source works or establish a public repository release. A manuscript proof, a runtime test, an archived kernel record and an external empirical result are not interchangeable.
